## Office Action Summary

Application No.

09/850,363

Applicant(s)

MARTENS ET AL.

Examiner

Gary W. Counts

Art Unit

1641

-- The MAILING DATE of this communication appears on the cover sheet with the corresponding address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 09 May 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 19-28 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 19-28 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

### Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## **DETAILED ACTION**

### **Status of the claims**

The amendment filed May 9, 2003 is acknowledged and has been entered.

#### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 27 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 27 is vague and indefinite because it is unclear how the result is actually part of the apparatus. How does this further limit the parts of the apparatus?

Claim 27 is vague and indefinite because it is unclear at what point the test begins to be timed (i.e. after the sample is collected or after incubation of the reagents and sample or from the time the same is first contacted with the reagent?

#### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 19, 22, 27 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakanome et al (Immunoreactive proinsulin detected by enzyme-

Art Unit: 1641

linked immnosorbent assay, Biomedical Research 18(5) 389-393, 1997) in view of Landa et al (US 4,626,684).

Nakanome et al disclose a spectroscopic measurement device comprised of a microtiter plate and a microplate reader (page 390, column 2). Nakanome et al disclose that this microtiter plate contains wells (reservoirs) (page 389, column 2). Nakanome et al disclose that the well comprises monoclonal anti-C peptide antibodies and labeled anti-insulin antibody (see abstract). Nakanome et al disclose the addition of a washing solution to the well (page 389, column 2).

Nakanome et al differ from the instant invention in failing to specifically teach a photomultiplier detector.

Landa et al disclose a photomultiplier detector for fluorescence immunoassay (abstract and column 6). Landa et al disclose that the use of this photmultiplier detector provides for rapid and sensitive analysis and is practical in the clinical environment (col 2, lines 40-68).

It would have been obvious to one of ordinary skill in the art to substitute the photomultiplier detector such as taught by Landa et al for the microplate reader of Nakanome et al because Landa et al shows that the use of this photmultiplier detector provides for rapid and sensitive analysis and is practical in the clinical environment.

3. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakanome et al and Landa et al in view of Milford et al (US 4,517,289).

See above for teachings of Nakanome et al and Landa et al.

Art Unit: 1641

Nakanome et al and Landa et al differ from the instant invention in failing to teach the labeled monoclonal anti-insulin antibody present in dried form.

Milford et al disclose the use of lyophilized monoclonal antibodies along with any other necessary reagents (col 8, lines 65-68). This allows for the antibody to be in stable form (col 8, line 67) and also is useful for the tissue typing of human tissues (col 3, lines 1-3).

It would have been obvious to one of ordinary skill in the art to incorporate the use of lyophilized antibodies as taught by Milford et al into the modified device of Nakanome et al because Milford et al shows that lyophilization of antibodies allows the antibody to be in stable form and also is useful for the tissue typing of human tissues. Further, it is well known in the art to lyophilize antibodies for preservation and storage purposes.

4. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakanome et al and Landa et al in view of Campbell et al (US 4,946,958).

See above for teachings of Nakanome et al and Landa et al.

Nakanome et al and Landa et al differ from the instant invention in failing to teach the label is a chemiluminescent label.

Campbell et al disclose a chemiluminescent label, which is conveniently linked to a monoclonal antibody or other protein and is used in an immunoassay for the quantitation of an antigen of interest (abstract). Campbell et al disclose that the use of this chemiluminescent label in assays provides a means of improving the sensitivity of

Art Unit: 1641

measurement of proteins and polypeptides by one to two orders of magnitude (col 7, lines 27).

It would have been obvious to one of ordinary skill in the art to substitute the chemiluminescent label as taught by Campbell et al for the label of Nakanome et al because Campbell et al shows that the use of this chemiluminescent label in assays provides a means of improving the sensitivity of measurement of proteins and polypeptides by one to two orders of magnitude.

5. Claims 23 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakanome et al and Landa et al in view of Schulz et al (Beziehungen zwischen den portalen and peripher-venosen Insulin-, proinsulin, Band 68 Heft 3, pp. 309-318 (1976).

See above for teachings of Nakanome et al and Landa et al.

Nakanome et al and Landa et al differ from the instant invention in failing to teach obtaining the sample by a probe arranged to be introduced in the Vena porta.

Schulz et al disclose obtaining a sample by insertion of a catheter (probe) in the portal vein (page 309). Obtaining a sample in this manner provides for a sample that can be used as a diagnostic tool of pancreatic hormone secretion in man and also provides significantly enhanced portal IRI concentrations and increased PLM (proinsulin-like material).

It would have been obvious to one of ordinary skill in the art to obtain a sample as taught by Schulz et al for the modified device of Nakanome et al because Schulz et al shows that obtaining a sample in this manner provides for a sample that can be used as

Art Unit: 1641

a diagnostic tool of pancreatic hormone secretion in man and also provides significantly enhanced portal IRI concentrations and increased PLM (proinsulin –like material)

Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakanome et al and Landa et al in view of Milford et al as applied to claims 19, 22, 27 and 28 above, and further in view of Schulz et al (Beziehungen zwischen den portalen und peripher-venösen Insulin-, proinsulin, Band 68 Heft 3, pp. 309-318 (1976).

See above for teachings of Nakanome et al, Landa et al and Milford et al.

Nakanome et al, Landa et al and Milford et al differ from the instant invention in failing to teach obtaining the sample by a probe arranged to be introduced in the Vena porta.

Schulz et al disclose obtaining a sample by insertion of a catheter (probe) in the portal vein (page 309). Obtaining a sample in this manner provides for a sample that can be used as a diagnostic tool of pancreatic hormone secretion in man and also provides significantly enhanced portal IRI concentrations and increased PLM (proinsulin –like material).

It would have been obvious to one of ordinary skill in the art to obtain a sample as taught by Schulz et al for the modified device of Nakanome et al because Schulz et al shows that obtaining a sample in this manner provides for a sample that can be used as a diagnostic tool of pancreatic hormone secretion in man and also provides significantly enhanced portal IRI concentrations and increased PLM (proinsulin –like material)

Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakanome et al and Landa et al in view of Campbell et al as applied to claims 19, 22,

Art Unit: 1641

27 and 28 above, and further in view of Schulz et al (Beziehungen zwischen den portalen and peripher-venosen Insulin-, proinsulin, Band 68 Heft 3, pp. 309-318 (1976).

See above for teachings of Nakanome et al, Landa et al and Campbell et al.

Nakanome et al, Landa et al and Campbell et al differ from the instant invention in failing to teach obtaining the sample by a probe arranged to be introduced in the Vena porta.

Schulz et al disclose obtaining a sample by insertion of a catheter (probe) in the portal vein (page 309). Obtaining a sample in this manner provides for a sample that can be used as a diagnostic tool of pancreatic hormone secretion in man and also provides significantly enhanced portal IRI concentrations and increased PLM (proinsulin –like material).

It would have been obvious to one of ordinary skill in the art to obtain a sample as taught by Schulz et al for the modified device of Nakanome et al because Schulz et al shows that obtaining a sample in this manner provides for a sample that can be used as a diagnostic tool of pancreatic hormone secretion in man and also provides significantly enhanced portal IRI concentrations and increased PLM (proinsulin –like material)

### ***Response to Arguments***

Applicant's arguments filed May 9, 2003 have been fully considered but are not found persuasive.

Applicant argues that the present invention is for a real time test system that measures insulin levels. By "real time" it is meant that the test system provides a result in a short period of time. Applicant further argues that Nanakome discloses an assay

Art Unit: 1641

for measuring pro-insulin and expressly teaches away from using such an assay to measure insulin. In response to applicant's arguments, the recitation a real-time insulin test system has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

With respect to applicant's argument that Nanakome requires a lengthy incubation period of three days. This argument is not found persuasive because the incubation period of three days that applicant is referring to on page 389 pertains to the immobilization of the antibody to the microtiter plate. This is for the preparation of a microtiter plate and not the actually testing process.

Applicant arguments of the secondary references are directed to emphases on the importance of the test system being "real time" and measuring "insulin" levels. These arguments are not found persuasive because as stated above the limitation real time insulin test system has not been given patentable weight because the recitation occurs in the preamble.

### ***Conclusion***

6. No claims are allowed.

Art Unit: 1641

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

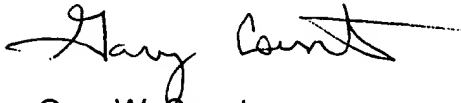

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary W. Counts whose telephone number is (703) 305-1444. The examiner can normally be reached on M-F 8:00 - 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on (703) 305-3399. The fax phone numbers for the organization where this application or proceeding is assigned are (703)308-4242 for regular communications and (703)3084242 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.
